

ALTERNATIVE SOLUTIONS

What alternative solutions could be used?

Glitter

A popular festival trend is glitter, but when removed or washed off this can easily wash directly to local streams and sit in soil, infusing it with chemicals within the glitter. This can create all kinds of problems for animals like fish and insects.

Biodegradable glitter is a new product, but an exciting one! This glitter uses natural ingredients that are not harmful to the environment.

Invitations

Paper mills contribute to air, water and land pollution and discarded paper and paperboard make up roughly 26% of waste in landfill sites.

Food and Drink

Transporting food and drink, like all other goods, has environmental impacts. Such as road congestion, air and noise pollution and CO₂ emissions.

Transport

Car exhausts produce a wide range of gases and solid matter, causing global warming, acid rain, and harming the environment and human health. Car pollution is one of the major causes of global warming.

Energy

Fossil fuels—coal, oil, and natural gas—do substantially more harm than renewable energy sources, including air and water pollution, damage to public health, wildlife and habitat loss, water use, land use, and global warming emissions.

Plastic Bottles

Plastic bottles do not biodegrade, so they will remain in our environment forever. When plastic degrades, toxic chemicals are released into the environment. Worse yet, any plastic that makes it into the environment will forever harm wildlife.
