

SPOTLIGHT _x THE FESTIVAL

GUIDANCE NOTES
MATHS

MATHS

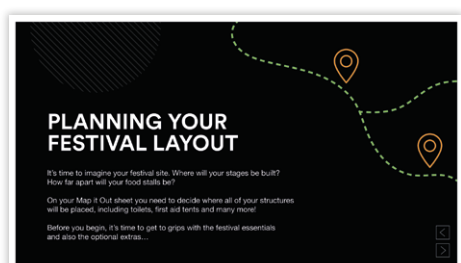

Remember the Introduction section must be completed first. The Maths presentation includes the following activity:

- Map it Out

The following printable resources are needed:

- Map it Out 1 (A3)
- Map it Out 2 (A4)

Each activity begins with a PowerPoint presentation that includes a group task and a follow-on resource to be carried out by students.

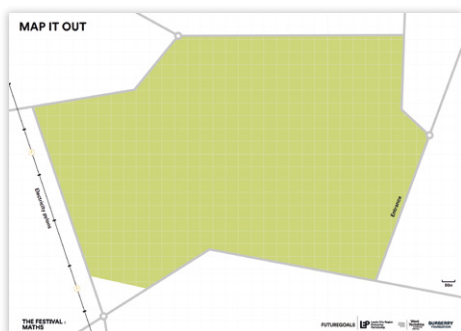

Map it Out

Slides 2–20

The purpose of this activity is to highlight the importance of planning ahead when creating an event. This task will test students' awareness of space, area and their ability to map out each element of the festival. Following the brief introduction slide, the **essential vs optional** discussion quiz will appear. For this, there isn't a right or wrong answer. In turn, different physical elements within a festival will appear (such as toilets) and students need to decide whether each element is essential or optional and explain WHY.

Students will then need the 'Map it Out' resources, which include a blank location and a series of guidelines to follow. The map is set out in 50m squares and each festival item has a specific 'spatial guideline' (meaning the total area that it will take up). The resource also provides students with the 'facility rules', which students must follow carefully, and icons to represent each item (these can be cut out and physically placed on the map).
